Background: Apakah wanita lebih banyak belanja daripada pria?

Men spend 75% more on goods bought in-store than women.

Meskipun stigma sosial cenderung menyimpulkan bahwa wanita lebih sering berbelanja, data statistik online mengungkapkan sebaliknya, dengan pria berbelanja 47% lebih banyak, dengan 75% nya di toko fisik.

Meskipun angka ini mengejutkan, data demografis seperti ini dapat menjadi alat yang sangat efektif dalam mengembangkan bisnis, terutama di sektor retail.

Background: Apakah wanita lebih banyak belanja daripada pria?

Dengan memahami data demografis, bisnis dapat mengadaptasi strategi pemasaran yang lebih terfokus pada pria, meningkatkan pengalaman belanja pelanggan, dan secara keseluruhan meningkatkan efisiensi operasional, dampaknya dapat dirasakan pada pengeluaran keseluruhan bisnis.

Oleh karena itu, teknologi *computer vision* (CV) dan pendeteksian *gender* pengunjung menjadi kunci untuk mengoptimalkan strategi bisnis berdasarkan data demografis.

Objective

Mengembangkan model klasifikasi gambar menggunakan arsitektur ResNet, VGGNet, dan GoogleNet untuk memahami pola pembelian berdasarkan jenis kelamin pengunjung. Penelitian ini bertujuan untuk mengembangkan strategy marketing dengan mendapatkan data gender pengunjung melalui classification image.

Goals : mendapatkan arsitektur dengan dengan score F1 yang terbaik.

A decorative graphic on the right side of the page. It features a series of black lines of varying thicknesses that resemble circuit traces or a stylized 'E' shape. Two small, square, black-and-white portrait photographs are integrated into the design. The top portrait shows a man wearing a baseball cap with the letters 'MLB' on it. The bottom portrait shows an older man with glasses. To the left of the bottom portrait is the number '00166'.

Arsitektur Model

VGG - VGG16

1. Framework: PyTorch
2. Kustomisasi Top Layer:
 - a. Input: 4096 node
 - b. Output: 2 node
3. Optimizer:
 - a. SGD
 - b. Learning Rate: 0.003
 - c. Momentum: 0.9
4. Loss Func.: Cross Entropy Loss

```
# Architecture
model = models.vgg16(pretrained=True)
model.classifier[6] = nn.Linear(4096, 2)

optimizer = optim.SGD(model.parameters(),
                        lr=0.003, momentum=0.9)
criterion = nn.CrossEntropyLoss()
```

GoogLeNet - InceptionV3

1. Framework: TensorFlow
2. Weights: Imagenet
3. Layer Trainable: False
4. Kustomisasi Top Layer: Yes
5. Optimizer:
 - a. Adam
 - b. Learning Rate: 0.001
6. Loss Func.: Binary Cross Entropy

```
# adding custom layer, global average pooling layer,
# and prediction layer
x = base_model.output
x = GlobalAveragePooling2D()(x)
x = Dense(1024, activation="relu")(x)
x = Dense(512, activation="relu")(x)
x = Dense(256, activation="relu")(x)
x = Dense(128, activation="relu")(x)
x = Dense(64, activation="relu")(x)
x = Dense(32, activation="relu")(x)
x = Dense(16, activation="relu")(x)
x = Dense(8, activation="relu")(x)
x = Flatten()(x)
predictions = Dense(1, activation="sigmoid")(x)

# merge model
model = Model(inputs=base_model.input,
              outputs=predictions)
```

ResNet - ResNet50

1. Framework: PyTorch
2. Kustomisasi Top Layer:
 - a. Input: sejumlah unit pada model tersebut.
 - b. Output: 2 node
3. Optimizer:
 - a. Adam
 - b. Learning Rate: 0.001
4. Loss Func.: BCEWithLogitsLoss

```
# Load the saved model
model = models.resnet50(pretrained=True)
num_features = model.fc.in_features
model.fc = nn.Linear(num_features, 2)
```

Training Performance

Kesimpulan

Dari ke-tiga pretrained model, yaitu VGG, ResNet, dan GoogleNet, hasil menunjukkan bahwa model VGG mencapai kinerja terbaik. Dengan jumlah epochs **sebanyak 10**, model VGG mampu mencapai **akurasi sebesar 98.6%** dengan runtime < 30 menit.

Penerapan model pengenalan gender pada pelanggan supermarket menggunakan pretrained model VGG dengan kinerja unggul memiliki beberapa dampak positif pada nilai bisnis:

- Efisiensi Cost Campaign
- Pengalaman Pelanggan yang Ditingkatkan
- Analisis Data Lebih Mendalam
- Peningkatan Targeting Promosi

Secara keseluruhan, penerapan model VGG untuk pengenalan gender dapat memberikan nilai tambah yang signifikan dalam konteks supermarket, meningkatkan efisiensi operasional dan meningkatkan pengalaman pelanggan dengan pendekatan yang lebih terarah.
